

∴ Your world connected

Pexip Infinity:
Cloud Video Interop
for Microsoft Teams

Connect enterprise video conferencing systems to Microsoft Teams meetings.

Pexip Infinity provides professional video conferencing systems with full video, audio and content sharing capabilities as they connect to Microsoft Teams meetings. It is designed for large enterprises and those under stringent regulatory compliance requirements.

Created for Microsoft Teams

Pexip for Microsoft Teams has been developed in close cooperation with Microsoft. It enables any video conferencing system to join Microsoft Teams meetings and allows authenticated systems to join as trusted participants without additional user interaction.

Maintains data ownership

The Pexip deployment model addresses the requirements of organizations regarding data ownership and control. Pexip can run in Azure Government or in a dedicated Azure cloud tenant.

Simplifies platform migration

A single application for both Skype for Business and Microsoft Teams video interoperability speeds up migration and enables organizations to migrate effortlessly from one solution to the other.

Accelerates journey to cloud

Pexip replaces or co-exists with existing video conferencing infrastructure, allowing customers to move IT workloads to the cloud at their own pace. Pexip leverages modern cloud technologies and scales according to usage and geographical requirements.

About Pexip

At Pexip, we believe we can make people’s everyday work more efficient, more productive, and more social. Pexip was founded on the idea that we can greatly improve the way people work and collaborate with colleagues, customers, partners, and vendors.

Pexip Infinity was certified as a video conferencing interoperability platform for Skype for Business in 2017. Since then, our engineers have worked closely with Microsoft to enable similar and expanded capabilities for Microsoft Teams.

Pexip is headquartered in Oslo, Norway, and has main offices in London, New York, and Sydney.

Quick specifications for Pexip Infinity

| | |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Video interoperability | H.261, H.263, H.264, RTV, VP8, VP9, RDP |
| Audio interoperability | G711, 722, 729, Siren/14, Opus, AAC-Lx, Speex, Silk, and more |
| Content interoperability | Full bi-directional dual-stream content sharing between all supported solutions, transcoding Video-based Screen Sharing (VbSS) to BFCP, H.239, and RDP |
| Functionality | Enables every Microsoft Teams user to invite to Teams meetings and automatically include third-party video conferencing dial-in instructions. Enables third-party video conferencing systems to join Microsoft Teams meetings. |
| Cloud support | Microsoft Azure, Azure Government (GCC), and others. Private, public, or hybrid deployments. |
