

Pexip Infinity

Cloud Video Interop for Microsoft Teams

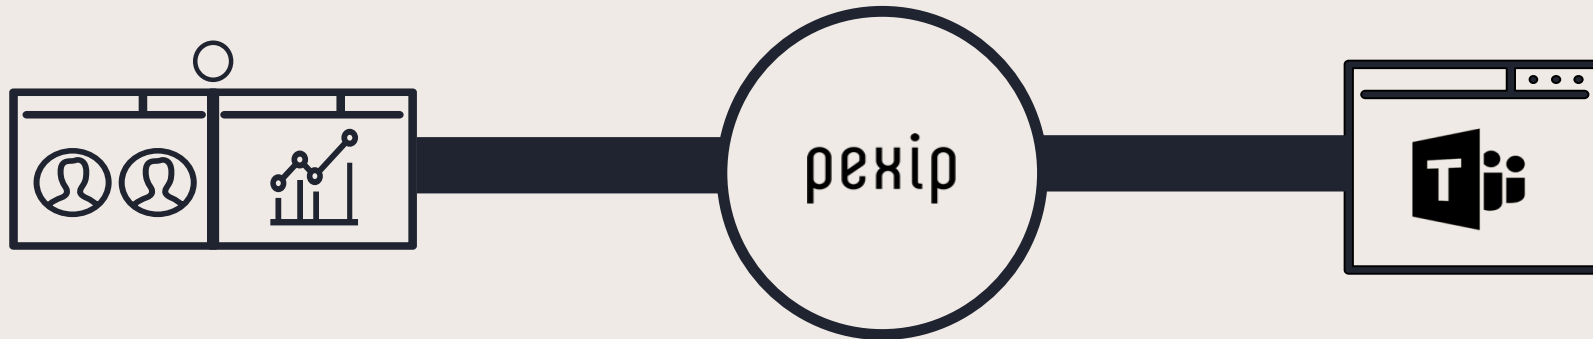

Demo instructions

Cloud Video Interop

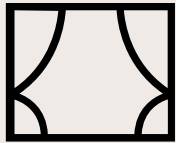

Connect professional VTC to Microsoft Teams meetings

The dedicated Pexip application ensures control and ownership for organizations with stringent regulatory compliance requirements

Demonstrations for Microsoft TSPs

There are 3 options to demo Pexip Infinity:

- MS IT hosted
- Pexip hosted
- TSP hosted

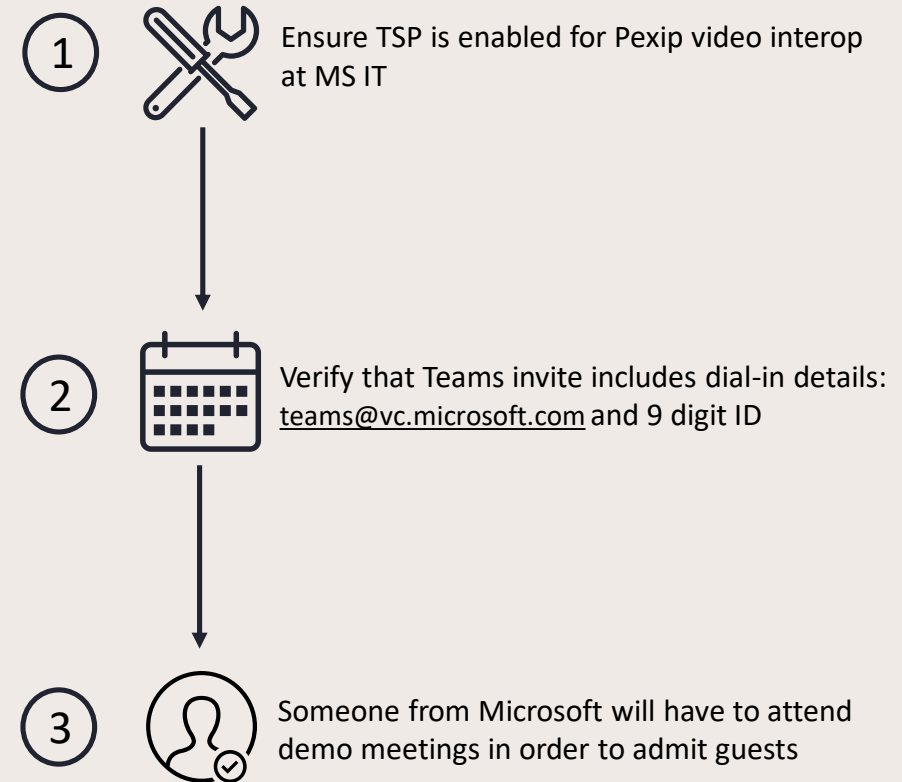

For all options, you can reach out to msft@pexip.com in order to connect with the closest regional Pexip SE or to share new customer opportunities.

Pexip can also assist with providing “Virtual” VTC systems that can be used to simulate VTC participants during product demos.

Microsoft IT hosted demo

Microsoft IT runs its dedicated Pexip Infinity deployment with Teams Interop enabled.

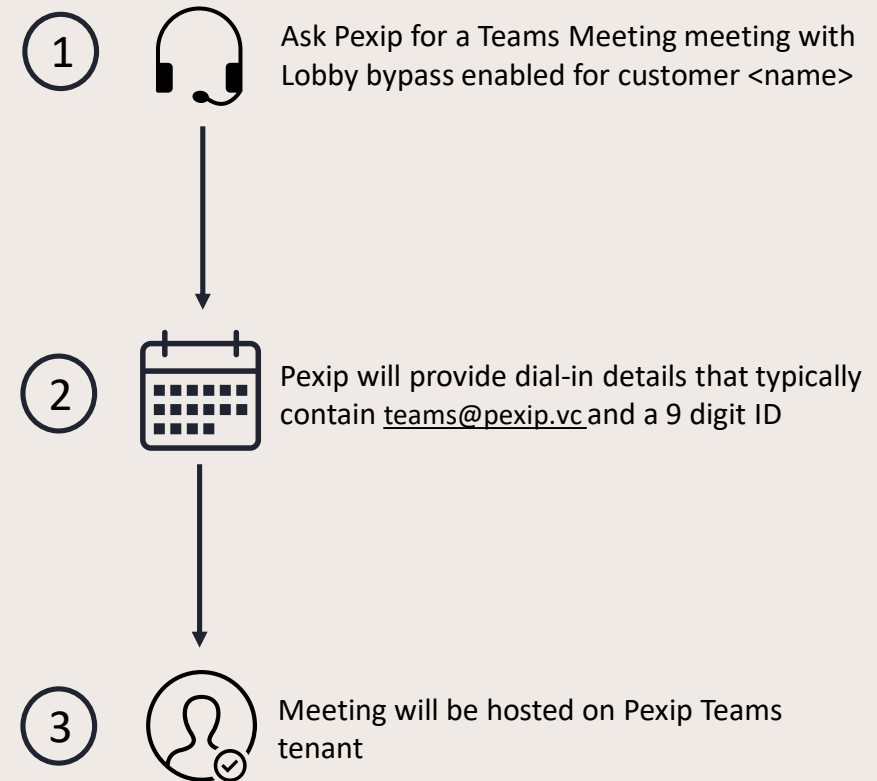

TSP needs to be provisioned/enabled for Pexip CVI. It is possible to use the Pexip hosted demo (see next slide) if for instance the TSP cannot be provisioned.

Pexip hosted demo

Pexip hosted demo can be a good backup if a TSP needs to demo to external customers.

Reach out to msft@pexip.com and get in touch with your local Pexip SE.

TSP lab demo

Mostly designed for learning and testing Pexip Infinity, TSPs can set up their own Pexip lab.

Pexip will provide licenses and software to be installed on the TSP's own Azure subscription:

- TSP sets up the meeting on the TSP preferred demo 365 tenant
- TSP hosts Pexip interop gateway in TSP Azure subscription
- Good for deep learning of the solution, but will require some time to set up by TSP
- Ensure to validate deployment together with Pexip SE prior to customer demo
